

There are 2 types of increment operators

1. pre- increment
2. post- increment

ex:

```
int a=9;
int b=a++; //post- increment op
System.out.println(a); // Outputs a=10
System.out.println(b); // Outputs b=9
```

```
int a=9;
int b=++a; // pre- increment op
System.out.println(a); // Outputs a=10
System.out.println(b); // Outputs b=10
```

There are 2 Types of decrement Operator

1. pre- decrement
2. post- decrement

ex:

```
int a=9;
int b=a--; // post- decrement op
System.out.println(a); //Outputs a=8
System.out.println(b); // Outputs b=9
```

```
int a=9;
int b=--a; // pre-decrement op
System.out.println(a); // Outputs a=8
System.out.println(b); // Outputs b=8
```
